USER INSTRUCTIONS

Java Plug-in for the mVisitor Application

The MPA's mVisitor Security application works directly from your computer's browser (Internet Explorer, Safari, Firefox etc.)

You would need to disable the Pop-Up Blocker in your browser and have the latest version of the Java Plug-in installed on your browser to run the application.

You can download and install the latest Java Plug-in from: http://java.com

If you have problem installing Java Plug-in please contact your system administrator for assistance.

Note: As of September 1, 2015 Google Chrome has discontinued support for the Java Plug-in, we suggest Chrome users to try an alternate browser.
