## Key handling,

Plastic blister with keys to be stored on front passenger seat, see picture below.

All XC90 are keyless start. Not necessary to move blister from its storing position in front passenger seat when starting the engine.

Remote keys must not be removed from plastic blister container.

N.B. : Key blades are supplied in a small plastic bag taped to the plastic blister. There is NO key blade inside the remote key. Keep the plastic bag taped to the plastic blister.

NEVER put all keys in the glovebox => when electricity is shut down to save battery the glovebox will not be possible to open until engine is started.
